

What can I grow with the Terrace Pro?

Most people don't consume enough leafy greens in their diet. Feed a large family, have extra to share and never buy leafy greens from a store again.

1. The Terrace Pro has more leafy green production capacity than other indoor gardens

Living Lettuce
16 heads

Green Crisphead,
Red Oakleaf, Red Butter
and Green romaine-type

Living Herbs
10 bundles

Basil, dill and parsley

Baby Greens
1 tray

Zesty Baby Asian Greens
or Premium Baby Leaf Lettuce

Microgreens
2 trays

Monthly output from our **Fresh Harvest Grow Kit** (at steady state harvesting in our 2-tier system)

2. Use the Terrace Pro as a nursery to start any plant before transplanting for your outdoor garden.

3. Grow your own way. Select from our curated and tested seed varieties or use your own. While we recommend leafy greens for maximum output, other crops such as snap peas, specialty tomatoes, peppers and edible flowers will grow effectively in the Terrace Pro as well.
